IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Original) A method of processing a layer containing a high-permittivity material in a plasma processing system, the method comprising:

providing a layer containing a high-permittivity material overlying a substrate; modifying the layer containing the high-permittivity material by exposing the layer to a plasma; and

wet etching to remove the modified layer containing the high-permittivity material.

- 2. (Original) The method as claimed in claim 1, wherein the modifying partially removes the layer containing the high-permittivity material.
- 3. (Currently Amended) The method as claimed in claim 1, wherein the modifying partially disassociates disrupts the atomic structure of the layer containing the high-permittivity material.
- 4. (Original) The method according to claim 1, wherein the modifying comprises introducing a process gas into a plasma chamber and creating the plasma, the process gas comprising a reactive gas.

- 5. (Original) The method according to claim 4, wherein the reactive gas comprises at least one of HBr and HCl.
- 6. (Original) The method according to claim 4, wherein the process gas further comprises an inert gas.
- 7. (Original) The method according to claim 6, wherein the inert gas is selected from He, Ne, Ar, Kr, Xe, or mixtures thereof.
- 8. (Original) The method according to claim 1, wherein the modifying comprises introducing a process gas into a plasma chamber and creating the plasma, the process gas comprising an inert gas.
- 9. (Original) The method according to claim 8, wherein the inert gas is selected from He, Ne, Ar, Kr, Xe, or mixtures thereof.
- 10. (Original) The method according to claim 1, wherein the high-permittivity material comprises at least one of Ta₂O₅, TiO₂, ZrO₂, Al₂O₃, HfSiO, and HfO₂.
- 11. (Original) The method according to claim 1, wherein the modifying further comprises RF powering a substrate holder that exposes the substrate containing the high-permittivity material to the plasma.

- 12. (Original) The method according to claim 1, wherein the modifying further comprises grounding a substrate holder that exposes the substrate containing the high-permittivity material to the plasma.
- 13. (Original) The method according to claim 1, wherein the modifying further comprises applying a DC bias to a substrate holder that exposes the substrate containing the high-permittivity material to the plasma.
- 14. (Original) The method according to claim 1, wherein the modifying further comprises electrically isolating a substrate holder from the plasma processing system, the substrate holder exposing the substrate containing the high-permittivity material to the plasma.
- 15. (Original) A method of processing a layer containing a high-permittivity material in a plasma processing system, the method comprising:

providing a layer containing a high-permittivity material overlying a substrate;

introducing a process gas into a plasma processing chamber and creating a plasma;

modifying the layer containing the high-permittivity material by exposing the layer to the plasma; and

removing the modified layer containing the high-permittivity material using wet etching.

16. (Original) A method of processing a layer containing a high-permittivity material in a plasma processing system, the method comprising:

providing a layer containing a high-permittivity material overlying a substrate;

introducing a process gas into a plasma processing chamber and creating a plasma;

anisotropically modifying the layer containing the high-permittivity material in accordance with a pattern by exposing the layer to the plasma; and removing the layer containing a high-permittivity material using wet etching.

- 17. (Withdrawn) A plasma processing system comprising:
 a process chamber capable of sustaining a plasma;
 a gas injection system configured to inject a process gas into the process chamber;
- a plasma source configured to create plasma from said process gas;
 a substrate holder that exposes a substrate comprising a layer of highpermittivity materials to the plasma, thereby modifying the layer;
- a controller that controls the plasma processing system; and
 a wet cleaning chamber disposed in or operatively coupled to said process
 chamber.
- 18. (Withdrawn) The system according to claim 17, wherein the plasma source comprises an inductive coil.

- 19. (Withdrawn) The system according to claim 17, wherein the plasma source comprises a plate electrode.
- 20. (Withdrawn) The system according to claim 17, wherein the plasma source comprises an antenna.
- 21. (Withdrawn) The system according to claim 17, wherein the plasma source comprises an ECR source.
- 22. (Withdrawn) The system according to claim 17, wherein the plasma source comprises a Helicon wave source.
- 23. (Withdrawn) The system according to claim 17, wherein the plasma source comprises a surface wave source.
- 24. (Withdrawn) The system according to claim 17, wherein the process gas comprises a reactive gas.
- 25. (Withdrawn) The system according to claim 24, wherein the reactive gas comprises at least one of HBr and HCl.
- 26. (Withdrawn) The system according to claim 24, wherein the process gas further comprises an inert gas.

- 27. (Withdrawn) The system according to claim 26, wherein the inert gas is selected from He, Ne, Ar, Kr, Xe, or mixtures thereof.
- 28. (Withdrawn) The system according to claim 17, wherein the process gas comprises an inert gas.
- 29. (Withdrawn) The system according to claim 28, wherein the inert gas is selected from He, Ne, Ar, Kr, Xe, or mixtures thereof.
- 30. (Withdrawn) The system according to claim 17, wherein the high-permittivity material comprises at least one of Ta₂O₅, TiO₂, ZrO₂, Al₂O₃, HfSiO, and HfO₂.
- 31. (Withdrawn) The system according to claim 17, wherein said wet cleaning chamber is operatively coupled to said process chamber.
- 32. (Withdrawn) The system according to claim 17, wherein said wet cleaning chamber is disposed in said process chamber.
- 33. (Withdrawn) The system according to claim 17, wherein the substrate holder is RF powered.
- 34. (Withdrawn) The system according to claim 17, wherein the substrate holder is grounded.

- 35. (Withdrawn) The system according to claim 17, wherein a DC bias is applied to the substrate holder.
- 36. (Withdrawn) The system according to claim 17, wherein the substrate holder is electrically isolated from the plasma processing system.
